TBWorldview

Printable Documentation Package

ToolBook 8 Reverse Engineering — October 2026

How to Use This Package

All documents are designed for printing (letter size, headers/footers, reasonable margins). Start with the overview and architecture in the main directory, then drill into Modules/ for per-DLL confirmed names, or the topic subdirectories for format, script, and dynamic notes.

Contents

01_Overview.pdf — High-level status, what the books are, what readers already do

02_Architecture.pdf — Runtime modules, open path, painting path, OpenScript

03_Naming_Progress.pdf — Pattern coverage and confirmed rename summary

Modules/tb80*_knownnames/ — Per-module confirmed names + nameable TSV samples

BookFormat/Book_Format.pdf — On-disk records, property IDs, polygon/arc geometry

OpenScript/OpenScript.pdf — Bytecode decoder status and example handlers

SoftICE/SoftICE_Notes.pdf — Live object layouts and paint-trace confirmations

Runtimes/Runtimes.pdf — Clean-room reader status

Source Notes

This package was generated from the existing ToolBook_Architecture.md, ToolBook_Chapter.md, naming_summary.md, toolbook_naming_progress.md, rename/*.py scripts, and project memory. Markdown sources and TSVs are co-located with the PDFs where useful for further editing.
